Program Functions and Highlighted Features

The barcode labeling program is software that performs barcode creation, management, and label printing operations for tracking purposes in businesses.

Thanks to the program, barcodes can be stored in an organized manner and printed quickly. The basic functions and prominent features of the program are explained below.

1. Barcode Listing

The barcodes contained within the program can be viewed as a list. Users can see all the barcodes in the system on the screen and perform the necessary checks. The barcode list generally includes the following information:

- Barcode number
- Barcode creation date
- Barcode image

This allows users to manage barcodes easily.

2. Printing Barcode Labels

One of the program's most important functions is to enable the printing of barcode labels.

Users can:

- Print a single barcode label.
- Print all barcodes in the list in bulk.

Thanks to this feature, label printing operations can be carried out quickly.

3. Transferring Barcode Files to the System

The program reads barcode images from a specific folder. Barcodes received in a ZIP file are extracted from their compressed state and added to the barcode folder. The program automatically detects and adds the barcodes in this folder to the list.

4. Updating the List (Refresh Feature)

The barcode list can be updated using the Refresh button in the program.

Thanks to this feature:

- Newly added barcodes are displayed.
- Deleted barcodes are removed from the list.
- The system operates in its most up-to-date state.

5. Printer Selection

The label printer to be used can be selected through the program. This feature allows barcode labels to be sent directly to the label printer. It works compatibly, especially with Zebra barcode printers.

6. QR Code and Barcode Viewing

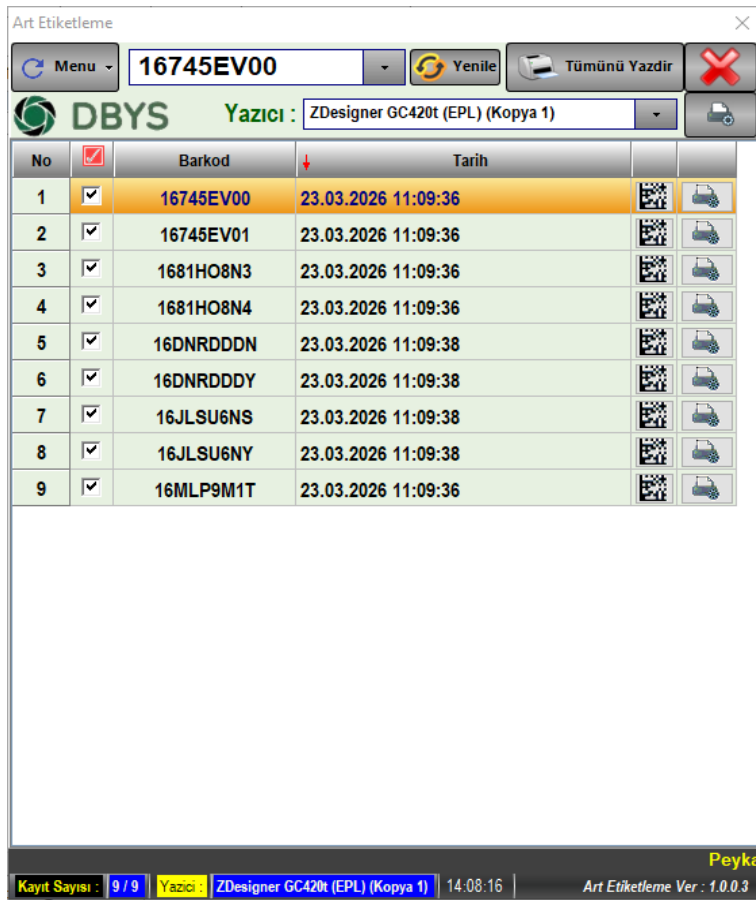

The program also allows for the visual display of barcodes. Users can check the barcode image through the barcode icon and verify its accuracy before printing.

7. Batch Barcode Printing

An important feature of the program is the ability to print multiple barcodes simultaneously. When the "Print All" option is used, all barcodes in the list are sent to the printer sequentially, and label outputs are obtained.

This feature saves time, especially when a large number of labels need to be printed.

Getting Started with the Program

When the program is run, the user is greeted by the Art Labeling screen. This screen is the main screen used for displaying barcodes and performing label printing operations. Users can list, update, and print barcodes through this screen.

The Menu button at the top of the screen is used to access other operations within the program. Through this menu, users can navigate to different sections such as the barcode sequence.

The area next to the Menu button is the section where the barcodes in the system are displayed and can be selected. The user can check the barcodes in this area.

The Refresh button is used to update the barcode list. When new barcodes are added to the barcode folder or changes are made to the system, pressing the Refresh button ensures that the list is updated.

The Print All button at the top of the screen is used to obtain a label printout of all selected barcodes. When this button is pressed, all selected barcodes are sent to the selected printer and printed in bulk.

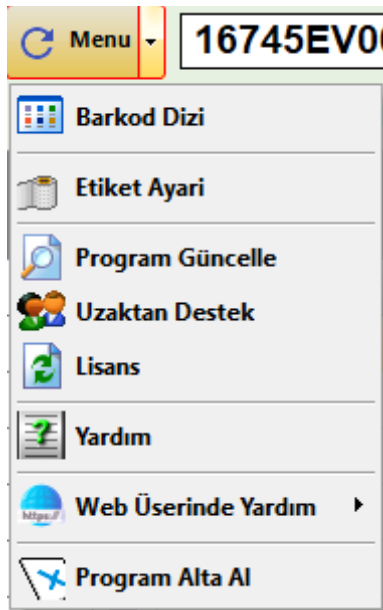

The printer can be selected in the upper right part of the screen. In this section, it is determined from which printer the labels will be printed. The middle part of the screen contains a table listing the barcodes. This table displays information such as the barcode number and the date the barcode was added to the system.

Users can select the desired barcode from this list and proceed with printing. When the icon next to the NO text in the table  is clicked, all barcodes become selected.

Similarly, clicking  the icon will deselect all selections.

Additionally, by double-clicking on the barcode line, only the label for the selected barcode can be printed. This feature allows users to quickly perform a single barcode printing operation. At the bottom of the screen, the record count information is displayed. This section shows the total number of barcodes in the system. Thanks to this screen, users can view and update barcodes, and easily manage barcodes by printing labels.

Menu

1. Menu Button:

It is located in the top left corner of the screen.

When you click on it, the submenu options open.

2. Menu Sub-Options:

Barcode Directory: This is the area where the barcode files are located.

Label Settings: The section where the design, size, and printing settings of the labels are determined.

Program Update: Option to check and download the latest version of the software.

Remote Support: Link for technical support or help with the program

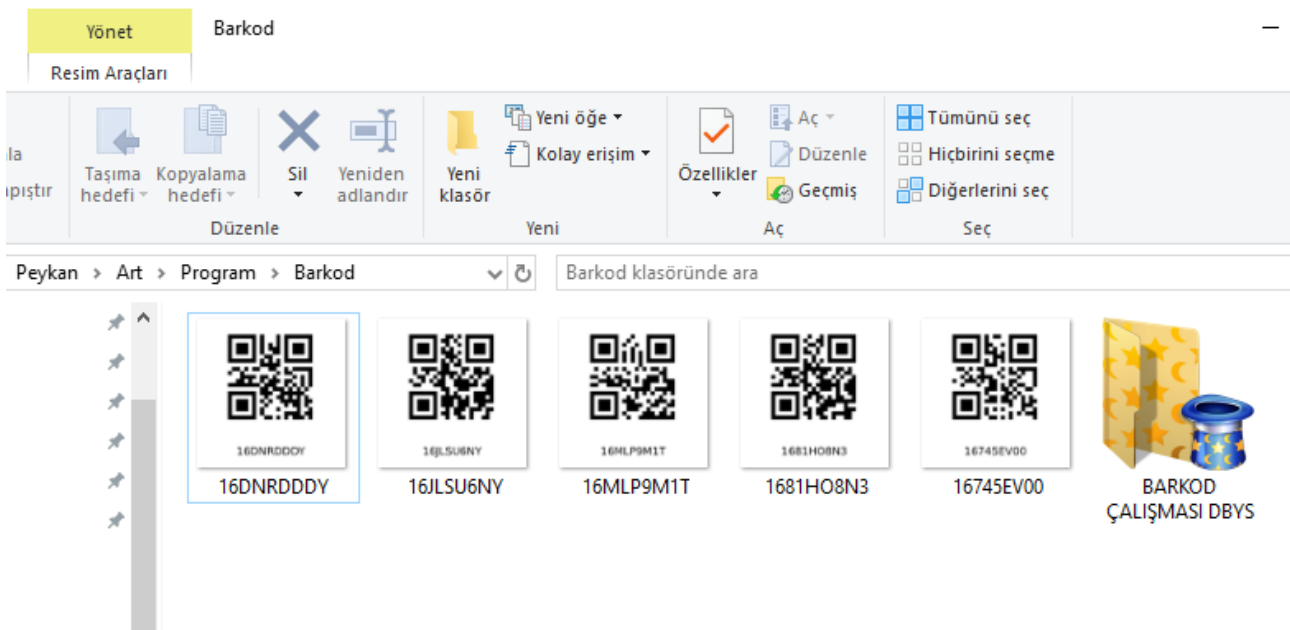

License: Program license information is displayed

Help: User manual or program-related documentation and guides

Web Help: Shows links to access information about the DBYS system and the program via the web.

Note: The menu provides users with quick access to the program's core functions and aims to make tagging operations easier to manage.

Barcode Series

When you press the Menu → Barcode Series option in the program, the folder containing the barcode images opens. This folder contains the files for the barcodes to be printed. This screen is used to add and check barcodes in the system.

The opened folder is located within the program's directory. Example folder path: C:\Peykan\Art\Barkod This folder stores images of the barcodes. Each barcode has a separate image file within the folder.

These images are used so that the barcode can be read and printed by the system. For example, the barcode files seen in the folder:

- 16DNRDDDDY
- 16JLSU6NY
- 1681HO8N3
- 16745EV00

Each file represents a barcode. Barcodes are generally sent to the system inside a ZIP file. Therefore, the compressed file must be unzipped before use. The following steps are applied to unzip the ZIP file:

1. Right-click on the ZIP file containing the barcodes. 2. After the files are extracted from the compressed state, the resulting barcode images are added to this folder.

After this operation, the barcodes become readable by the program. Once the barcode files are added to the folder and the program is reopened or the Refresh button is pressed, the barcodes are automatically added to the list on the Add Labeling screen.

This allows users to view barcodes within the program and print labels. The barcodes contained in this folder:

- Are listed on the Art tagging screen
- Can be printed individually
- Can be printed collectively using the "Print All" option.

Tag Setting

Darkness: The print intensity / blackness level of the label.

Speed: The printing speed of the printer.

Label Position: X:1, Y:1 (The horizontal and vertical starting position of the label on the printer).

Number of Labels per Print: 1 (How many labels will be printed at once).

Waiting Time Between Two Tags: 9 seconds (Waiting time between consecutive tags)

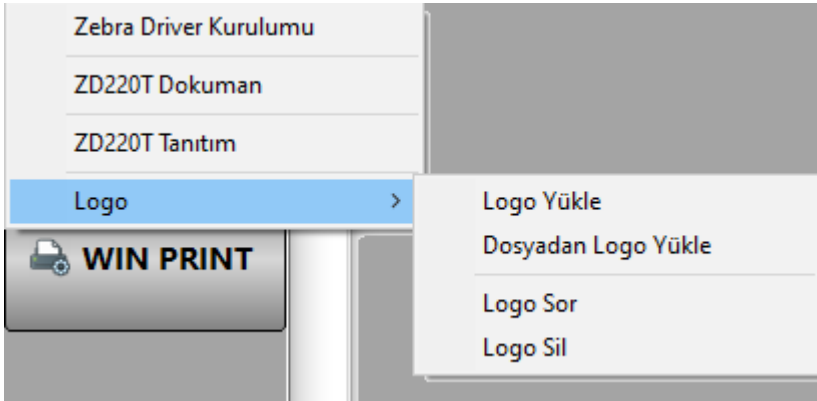

Logo: When the logo option is active, the logo view becomes active.

It is possible to adjust the X position (horizontal axis) and Y position (vertical axis) of the logo on the label.

How to Upload a Logo?

Select the logo from the menu that opens when you click the **Print Driver button**.

In the new menu that opens, **Upload Logo**: This is the area where you can upload your logo with a single click. **Upload Logo from File**: Allows you to upload your logo by selecting the file in the required format (zres). **Ask Logo**: Prints a list of the graphics contained within your printer. This allows you to see whether your graphic has been uploaded or not.

Erase Logo: This is used to erase the graphic inside your printer. **Caption**: This is a free text field that can contain any extra information you want, such as a company name, that will be written under the barcode content.

When activated, an area where you can write and a section where you can set the font size appear. After adjusting the text and size, you can make horizontal and vertical axis positioning settings using the X and Y headings below.

Record: Saves the settings made.

Print Driver: Displays printer driver settings and documents, and also allows for logo upload adjustments.

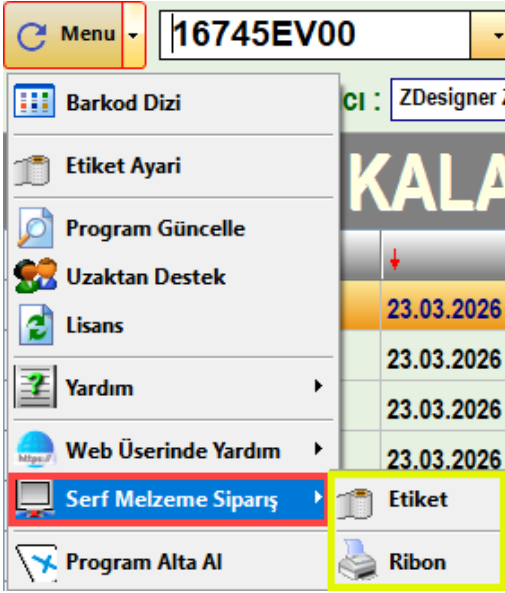

Test Print: Prints a trial label.

Win Print: Shows the printers available on the computer.

Close: Closes the page.

Consumable Order – Label

Consumable Order – this is the area where you can order the necessary consumables to use our program. Thanks to this area, you can view the total price of the missing material through the program and order it immediately.

When the "Label" menu is clicked, the user is greeted with an order form. To place a label order through this screen, all necessary information must be entered completely. The top part of the screen displays the unit price and total amount for the selected product. In the lower section, the user is asked for contact and address information.

Sipariş Oluştur

In the Personal Contact Information section:

- Full Name
- Email Address
- Mobile Phone information must be entered.

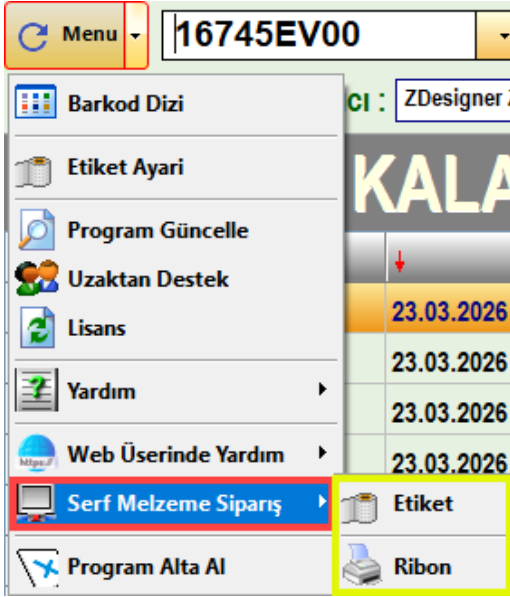

In the Address and Current Information section:

- Company name
- Selection of province / district
- Neighborhood and detailed address information
- Tax number or T.C. identity number
- Tax office information must be filled in.

All mandatory fields are indicated by (*). After entering the information completely, the order is completed by pressing the “Create Order” button. After the order is completed, an informative email regarding the order will be sent to both you and us.

Consumable Order – Ribbon

Consumable Order – this is the area where you can order the necessary consumables to use our program. Thanks to this area, you can view the total price of the missing material through the program and order it immediately.

When the **ribbon** menu is clicked, the user is greeted with the order form. All necessary information for placing a ribbon order must be entered completely on this screen. The unit price and total amount for the selected product are displayed at the top of the screen. The bottom section requests contact and address information from the user.

When the “Register” button is clicked, the Activation Code Request screen opens. This screen displays the user's first name-last name, email, phone, company information, along with a code generated by the system specifically for the computer. After filling in the required fields, the application is submitted.

After the forwarded license request is reviewed, a unique activation code is generated and shared with the relevant user. Licensing is completed when the activation code is entered.

- 1) Enter the company name on the opened screen.
- 2) Enter the license code in the area indicated by the red arrow
- 3) Uncheck the demo version box.
- 4) Click the OK button.
- 5) Start using the program in a licensed manner.
